

**I-300 Series Firmware Upgrade  
Guide Version 1.1.XX to V1.2.XX**

# Firmware Upgrade Procedure

- Upgrading an I-300 Series Switch from version 1.1.XX to version 1.2.XX is a two step process that requires using a special “Intermediate” firmware file
- Upgrading a switch with version 1.2.XX to a later 1.2.XX version does not require using the Intermediate firmware file.
- In order to upgrade from version 1.1.XX to version 1.2.XX follow the following procedure:
  1. Download the Intermediate Firmware file from here:  
[SignamaxFW-I300XX\\_V1.1\\_Inter\\_V1.2.zip](#)
  2. Unzip the file on your computer
  3. Upgrade the switch using the web GUI or CLI with the file  
(SignamaxFW-I300XX\_V1.1\_Inter\_V1.2) from the previous step
  4. Reboot the switch
  5. Download the latest version 1.2.XX firmware file from the I-300 Series web page:  
<https://signamax.com/industrial-ethernet/i-300-8-port-industrial-gigabit-poe-manage-d-switch/>
  6. Unzip the file on your computer
  7. Upgrade the switch using the web GUI or CLI with the file from the previous step
  8. Reboot the switch
